

# Community Microgrid in *South Durras*

**The Australian National University, SHASA, Essential Energy and Zepben have partnered on a project, to see if a microgrid will work in South Durras, Broulee, Congo, Bodalla, Central Tilba/Tilba Tilba and Mystery Bay.**

You are invited to take part in the second round of community forums being undertaken by the South Coast Microgrids Feasibility Project (SURF).

At these forums the Project Partners will provide an update on the project to South Durras residents, and you will also have the chance to have your say on microgrid options for your community.

The microgrid feasibility studies are funded by the Federal Department of Industry Science Energy and Resources.
